Projects

Fridgedize

Fridgedize allows you to enter three ingredients and using that input, generates a list of recipes, with pictures and nutritional information. The technologies used in this web application are Javascript, HTML, CSS, API traversal and jQuery.

BounceAround

A travel application that allows a user to build and save an itinerary for a trips. The application uses the Google Maps API, Google OAuth, Local Auth, Express, NodeJS, Bootstrap, HTML, CSS, Javascript, EJS, PostgreSQL and jQuery.

BAM Walkthroughs

BAM Walkthroughs is an ongoing project, done in collaboration with two other colleagues. It is a series of web development walkthroughs. It covers everything from basic HTML and CSS to building a decoupled app with an Express/NodeJS backend, an AngularJS frontend that communicates through a RESTful API to the backend.

Education

Galvanize - *Web Development Immersive | May 2016 - Present*
- A six month intensive course on Full Stack Development (MEAN Stack)

University of Utah - *BA in Middle East History | August 2009 - April 2014*
- Degree's focus was on the Arabic language and Modern US/Middle East relations
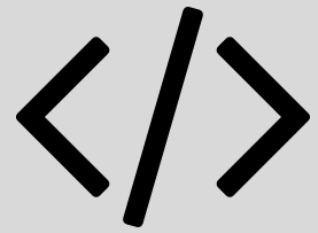

Experience
